

Seminar Invitation

WASP Best Practices Exchange: Linking technological capabilities to the business case for wind-assisted ship propulsion

Date: 23/02/2023, 10.30-12 CET

Place: Online (Microsoft Teams)

In this seminar, we bring together a range of experts from the WASP project to make a connection between the capability of wind propulsion technologies, prediction tools and current analysis of the business case for such installations. This information exchange will cover a number of themes, with the intent to provide the audience a clear picture of the current (and future) prospects of wind propulsion in the maritime sector. The discussion will include an introduction to a new decision tool for shipowners, an overview of technological forecasts based on policy and analysis of results at sea.

The connection information for this exchange can be found below:
